

Forget everything you think you know about contact lenses...
Onefit is the game changer.

Onefit™ and Onefit™ MED scleral lenses are an excellent alternative to soft or gas permeable (GP) lenses. Soft lenses often dry out over the course of the day, causing discomfort and fluctuating vision. GP lenses offer better vision than soft lenses, but are usually less comfortable. Onefit™ and Onefit MED™ provide crystal clear and reliable vision performance with exceptional comfort!

Some lenses present challenges with certain prescriptions, but Onefit™ and Onefit MED™ scleral lenses work great with most prescriptions and provide vision for distance, near and everything in between!

Scleral lenses are a great option for just about anyone!

- Those who experience dryness, discomfort, or contact lens intolerance
- Athletes and active individuals – all eye shapes and conditions
- All cornea types – normal to highly irregular
- Those with Keratoconus, Astigmatism (toric), Presbyopia (multifocal or bi-focal), patients with less than optimum results from LASIK and Post-RK, and much more

Benefits of wearing Onefit™ and Onefit™ MED Scleral Lenses:

- Consistent all day comfort and hydration
- Crisp vision with no fluctuation, halos or glare
- Optimum oxygen to your cornea for long-term corneal health
- Lens and tear layer provide protection from wind, dust and debris

How Onefit™ and Onefit™ MED Scleral Lenses Work

These lenses are made of materials that lets oxygen easily and constantly pass through the lens. They incorporate a unique design that eliminates irregularities of the shape on the front surface of your eye to correct your vision. Onefit scleral lenses are applied to the eye with a non-preserved saline solution that provides a thin cushion of fluid between the lens and your eye. This makes them very comfortable, reduces redness and creates a healthy environment for your eye.

What's the difference between Onefit™ and Onefit™ MED?

Onefit™ is designed for normal to moderately irregular corneas. Onefit™ MED is designed for highly irregular, medically indicated, or larger corneas. Onefit™ MED also allows your eye care provider to custom design a lens specifically for your eye! Here's an overview, to help understand why your doctor may suggest one over the other.

Onefit™:

- Astigmatism & Presbyopia
 - Mild to moderate keratoconus
 - Mild to moderate irregular corneas
- And more!

Onefit™ MED:

- Moderate to severe keratoconus
 - Moderate to severe ectasias
 - Post-RK, Post-LASIK, PMD
 - Ocular Surface Disease
 - Astigmatism & Presbyopia
 - Larger corneas
- And more!

"I have never been able to wear any type of contact lens because I have dry eyes and now I need bifocals to read. My doctor recently fit me with Onefit™ lenses and I love them! I wear them comfortably at least 15 hours a day, my vision is better than I see with my glasses, and I am able to read with them as well!"

S.B. – 52-year-old female, Atlanta, GA
